PROJECT BRIEF

Cameby Downs Mine required the construction of Truck Washdown facility at the mine site for the purposes of washing down equipment prior to undertaking maintenance and repair activities.

Project Challenges

Interactions with heavy plant. On ground works with exposure to heat and weather.

Project Approach & Objectives

Secure a laydown area with all relevant safety controls in place. Planned tasks to optimise labour with controls in place for all Trigger Action Response Plans (TARP) events. Optimise local trades for sub-contracting works.

- The project comprised the manufacture, supply, delivery, installation, testing, commissioning, and maintenance of the civil, structural, mechanical and piping elements on this project
- Construction of truck wash bay within active mine workshop area around large machinery
- Complex and detailed earthworks including trenching and bracing
- Supply and installation of structural and mechanical elements for the truck wash down facility
- Construct water supply and wash down pad discharge pipelines
- Complex formwork and concrete with reinforcing
- Manufacture and Installation of gantry walkways
- Supply & construct pump shed
- Sub grade improvements for lay down areas
